

DeepSea spool for umbilical

The DeepSea spool is a rotating support for the divers umbilical. This system is built to increase safety and ease the work for professional divers in a simple and ergonomic way.

The chassis has four fixing points for transportation or solid mount inside a truck or on a boat. Upon request, four wheels can be delivered.

The DeepSea spool is made for umbilicals consisting of four elements:

- Main gas hose
- Pneumo hose
- Communication system cable
- Video and light cable

The DeepSea spool is built for umbilicals up to a length of 100 metres^{*1}

Characteristics

Weight:

50 Kg

Dimensions:

60 x 60 X 90 cm
